Many golden yellow flowers are in bloom this month. How many can you spot? Do you know all of their names?

In some places July is hotter than August. In my area this is the case. In some places it is opposite. What is it like in your area?

Can you see any turkey vultures circling? Watch them and record observations here. Is there a difference between vultures and buzzards?

Can you hear the crickets? Can you catch one? Do you know how they sing? Why do they sing?

Can you hear any cicadas buzzing? My mom and I call them hot bugs, because you only hear them when it's quite hot.

When do your trees start to turn colors? In some areas it is in the last week of August. Keep an eye out!

# NATURE JOURNAL CALENDAR

See what's happening in the month of August. Then take notes about what's happening in your backyard here in this calendar!
