

D E C E M B E R

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
					This is a great time of year to stare at the sky. Even if it cloudy or snowing. What colors are in the sky during sunset? How about midday?	
		Where are the fish when everything is iced over? Take a look before you do research- and make a hypothesis!				
What birds can you see from your window? Perhaps you can look out your window every morning. Record what you see here.						Did glaciers ever cover where you live? If so, what land forms did they leave? If not, what formed it? Do you live where there are many lakes? What about mountains?
	Is there snow on the ground? Has anything left its tracks in it?			Winter solstice! The days will get longer after this. Enjoy the shortest day of the year!		
			Have you ever picked up a rock and found a fossil? Those are all that remains from creatures that lived long ago. Sketch one here.			

NATURE JOURNAL CALENDAR

See what's happening in the month of October. Then take notes about what's happening in your backyard here in this calendar!
